

MODULE 5.2

File and Folder Management & User Interfaces

File and Folder Organization

Data is stored hierarchically in Drives, Folders, and Files.

Drives

Main storage areas (C:, D:)

Folders

Containers that hold files.

Files

The actual data (docs, images).

File Names & Extensions

A complete file name has two parts separated by a dot.

document.txt

Name: "document" (chosen by user)

Extension: ".txt" (tells OS the file type)

Common Extensions

.docx	Word Document
--------------	---------------

.jpg	Image File
-------------	------------

.mp3	Audio File
-------------	------------

.exe	Executable Program
-------------	--------------------

Basic File Operations

Copy & Paste

Duplicates the file. It exists in both locations.

Cut & Paste

Moves the file. It is removed from the original location.

Rename

Changes the name of the file or folder.

Delete & Recycle Bin

Moves files to Recycle Bin. They can be restored until emptied.

User Interfaces

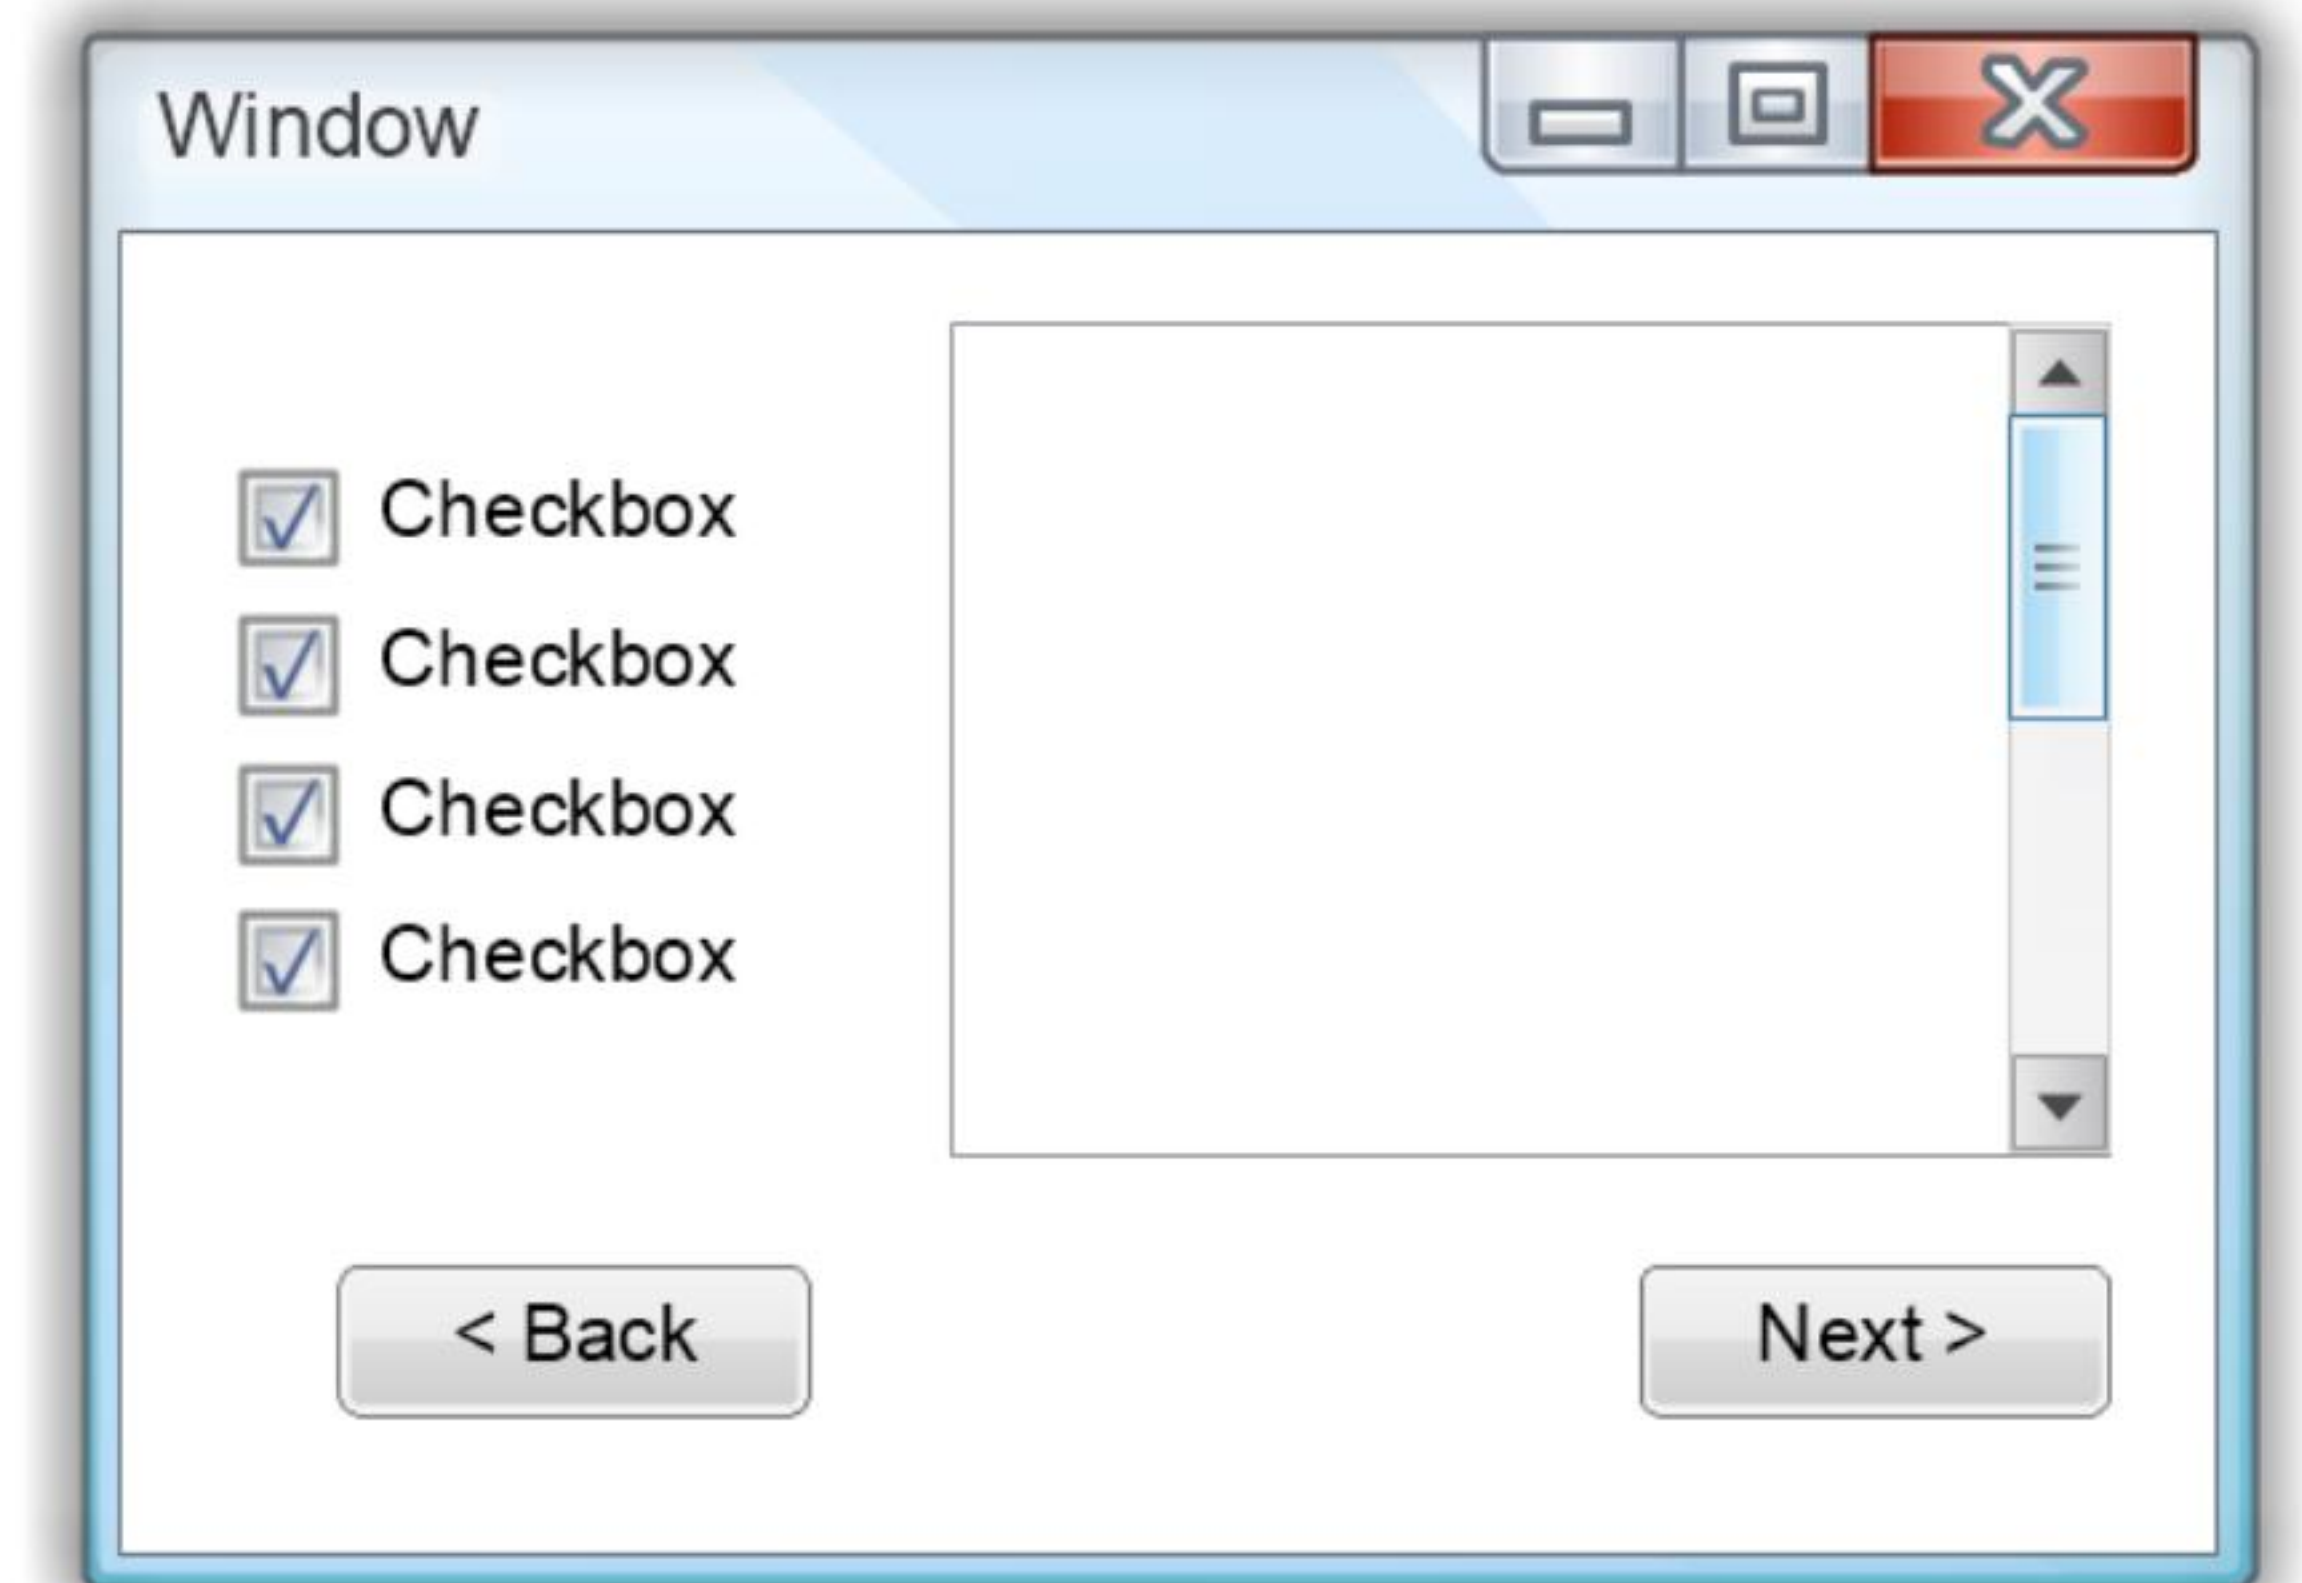

How the user interacts with the Operating System.

1. Command Line Interface (CLI)

- User types text commands.
- Harder to learn, needs memorization.
- Example: MS-DOS, Linux Terminal.

2. Graphical User Interface (GUI)

- Uses graphics, icons, and menus.
- Easy to use with a mouse.
- Example: Windows, macOS.

GUI uses WIMP

Graphical interfaces are built on these four visual elements.

A large, bold, blue capital letter 'W' centered within a light gray rounded square.

Windows

A large, bold, green capital letter 'I' centered within a light gray rounded square.

Icons

A large, bold, orange capital letter 'M' centered within a light gray rounded square.

Menus

A large, bold, red capital letter 'P' centered within a light gray rounded square.

Pointer

Module 5.2 Quick Review

Q: What does a file extension do?

A: Tells the OS the file type.

Q: Difference between Copy and Cut?

A: Copy duplicates; Cut moves.

Q: What does WIMP stand for?

A: Windows, Icons, Menus, Pointer.
